

Talk with more intelligence.

Whether it's finding out whom Billy *really* likes, checking e-mail on the run, or conducting a teleconference from the car, mobile phones are an essential part of our lives.

Which is why you should know that an astonishing 4 out of 10 mobile phones delivered in the world today run on ST microchips. And ST is poised for the future of wireless, working with today's leading manufacturers to make tomorrow's phones positively brilliant.

Spread the news.

We put more intelligence into everything.

STMicroelectronics (formerly SGS-THOMSON) • A world leader in semiconductors for consumer products, automotive, telecommunications, computer peripherals and industrial automation and control systems • Ninety-five locations on five continents • www.st.com
